PREFACE

This publication is a marketing summary of the 1991 New York grown Cucumber, Sweet Corn and Iceberg Lettuce crops.

* * * * *

The information contained in this summary was obtained from reports published by the U.S. Department of Agriculture's Federal-State Market News Service, and National Agricultural Statistics Service.

* * * * *

This summary was prepared from data compiled by the following representatives:

John Kerrens
Walden, New York

John F. Shirley
Rochester, New York

We wish to express our sincere appreciation to the growers, shippers, brokers, processors and buyers for their cooperation.

SWEET CORN 1991 CROP

ACREAGE: In New York State 28, 600 acres of sweet corn for fresh market were planted in 1991, up from 27,600 acres in 1990. Harvested acres were 26,500 in 1991, which equaled the same for the harvested acres in 1990. The total U.S. sweet corn planted in 1991 were 175,400 acres which was a decrease from the 185,800 planted acres in 1990.

PRODUCTION: According to the New York State Agricultural Statistics Service, sweet corn production for 1991 was 1,988,000 cwt., a decrease from 2,120,000 cwt. in 1990. The yield per acre in New York State was 75 cwt in 1991 which was a decrease from the 80 cwt per acre in 1991.

PLANTING, GROWING, AND HARVESTING: On April 22th weather and planting conditions varied throughout the state. As weather permitted, vegetable growers across the state were tilling fields and planting early sweet corn for fresh market under plastic. By April 29th rain and cool temperatures slowed field work but vegetable growers continued planting. On the week ending May 4th temperatures were seasonably mild with light to moderate rainfall. Vegetable planting continued and Hudson Valley sweet corn planting was approximately 25 % completed. On the week of May 13th rain and wet fields continued to slow planting which limited field work. By May 20th excellent weather aided the drying of fields and allowed farmers to resume outside activities. Corn planting progressed rapidly with approximately 48 % of the acreage planted. Excellent weather prevailed throughout the month of May and corn planting progressed considerably as 74 % of the intended acreage was in. By early June mid-summer heat and humidity prevailed and temperatures averaged about 10 degrees above normal. Vegetable planting continued active and by June 24th corn planting was virtually completed. Dry weather continued into July as rain was needed to prevent water shortages. On July 5th growers were harvesting early sweet corn, which continued throughout the month. By mid-August sweet corn harvesting was at it's peak and dryness was somewhat abated by rain as growers were busy monitoring their crops for increased diseases. Most corn had tasseled but the recent heat had stunted some growth as more rain was needed to ear and prevent further crop damage. On the week ending August 25th rainfall from Hurricane Bob helped alleviate dryness and upgrade soil moisture. Corn yields varied according to moisture. By mid-September sweet corn harvesting was virtually completed and supplies were plentiful.

MARKETING: The first f.o.b. prices for sweet corn were reported on July 16th, 1991 with 4 1/2 dozen yellow at \$5.00-\$6.00. Corn prices decreased slightly on July 17th to \$5.00-\$5.50. By July 29th, prices had rose to \$6.00-\$6.50. On August 5th, prices were at a season high of \$9.00-\$10.00. By August 19th prices had fell to \$9.00. On September 9th prices were at \$6.00-\$6.50. The last report was issued on September 24th, with prices at \$7.00-\$8.00.

PACKAGING AND SHIPMENTS: Hudson Valley corn is packed mostly in wirebound crates, though paper and mesh sacks are also used, primarily for delivery to roadside stands. All shipments are made by truck and converted to trucklot equivalents on the basis of 950 containers per trucklot. 4,390 trucklots (40,000 lb units) were shipped during the 1991 season a significant increase from 1990's 1,057 trucklots.

WHOLESALE MARKETS: The primary markets for New York corn are in the Northeast, New York City being the principal receiving area. Other important markets are: Atlanta, Baltimore, Boston, Buffalo, Philadelphia, Columbia SC, and Philadelphia.

**WESTERN AND CENTRAL NEW YORK - CUCUMBERS
1991 CROP**

WEATHER AND CROP:

Warm and wet weather in April delayed early fieldwork and planting. Unusually dry weather during June and July resulted in drought conditions and required extensive irrigation. Harvest began the second week of July, with peak weekly volume occurring the last week of July. Uneven supplies due to the dry weather resulted in lower supplies in August, with the season finished by the end of September.

MARKETING:

The first cucumber F.O.B. price report was issued on July 16, with initial quotes at \$7.50-8.00 for 1 1/9 bushel cartons of waxed mediums (super selects) and \$3.00-3.50 for 1 1/9 bushel cartons of fair quality (selects). Carton 24s were first quoted at \$2.25-3.00. Prices peaked at \$14.00 for mediums and \$7.00 for fair quality in mid-August. Prices then declined until mid-September, when they rose for a two week period before declining as the season ended.

SHIPMENTS:

Peak shipments occurred early in the season, during the last week of July. Shipments remained fairly steady during mid-August thru mid-September before declining as the season ended.

Total truck shipments for the 1991 season were 707 truckloads (40,000 lbs.) compared to 954 truckloads for the 1990 season and 697 truckloads for the 1989 season.

L E T T U C E 1991 CROP

ACREAGE: According to the New York State Agricultural Statistical Service, total lettuce acreage planted for 1991 was 3,000 acres, which equaled the same as the total planted acreage in 1990. Harvested acres were 2,600 in 1991, which equaled the same as the total harvested acres in 1990. Planted in the U.S. were 225,500 acres in 1991, a decrease from the 236,300 acres planted in 1990. Harvested in the U.S. were 222,000 in 1991, a decrease from the 231,000 in 1990.

PRODUCTION: New York State's total production for lettuce in 1991 was 494,000 cwt., down from the 520,000 cwt. in 1990. The average yield per acre in New York State for 1991 was 190 cwt., down from the 200 cwt. in 1990. Total U.S. average yield per acre in volume in 1991 was 326 cwt, up from the 317 cwt in 1990.

WHOLESALE MARKETS: New York lettuce was primarily shipped to northeastern markets. The primary markets for New York lettuce were New York City, Baltimore, Boston, Buffalo, and Philadelphia.

EASTERN NEW YORK - ORANGE COUNTY

GROWING CONDITIONS: Warm weather with light to moderate rainfall prevailed, and by April 22nd, early lettuce planting was underway. Planting was slowed on April 29th when rainfall left standing water in some fields. On May 6th cool temperatures accompanied with rain limited fieldwork once again. By May 20th excellent weather prevailed and lettuce planting was at it's peak. By the first week of June lettuce planting was virtually completed.

HARVEST: June's weather was dry and seasonable but ideal for fieldwork and by June 17th lettuce harvesting was underway. Harvesting of lettuce continued throughout the month of June into early July. First cutting of lettuce was completed by July 15th. Second cutting began around the second week in August and continued to about September 23rd even though the growing season had ended.

SHIPMENTS: Light shipments began on July 9th, and were virtually completed by July 21, 1991. A total of 300 trucklot equivalents were shipped during the 1991 season which was 83 trucklots more than the 217 trucklots shipped in 1990.

MARKETING: Due too heavy rainfall and humidity during the 1991 growing season supplies for Iceberg was insufficient to quote. No F.O.B. was issued for Iceberg lettuce.

WESTERN AND CENTRAL NEW YORK - ICEBERG LETTUCE

1991 CROP

GROWING CONDITIONS:

Warm and wet weather during April delayed fieldwork and planting. During June and July, weather conditions turned hot and extremely dry, with drought conditions creating gaps in planting and harvesting schedules.

Harvesting of Iceberg lettuce began the last week of June, with peak harvest activity occurring the week ending July 13. Harvest activity declined during late July, and remained at fairly low levels through the season.

MARKETING:

Iceberg lettuce, from Upstate New York, primarily Oswego County, is packed in vacuum cooled, waxed cartons containing 24 heads, and is generally sold in Northeast markets, including both chain stores and commission houses in New York City, Boston, Philadelphia, Baltimore, Buffalo, Rochester and Syracuse.

The first Iceberg lettuce F.O.B. report was issued on June 24, with cartons of 24 heads quoted at \$7.00. Prices then declined slightly, and traded in a range of \$5.50-6.00 for most of the season.

SHIPMENTS:

During the 1991 season, shippers reported a total of 383 truckloads (40,000 lbs.), compared to 555 truckloads during 1990, and 678 truckloads during 1989. The first shipments were reported on June 21, and the final shipments of the season on September 4.
